WITH MedKlinn

Picture **A** - shows extensive destruction of cells by active virus.

Picture **B** - cells show no sign of virus activity; they remain healthy and intact.

Molecular Research Laboratory, Department of Medical Microbiology, Faculty of Medicine, University Malaya, Kuala Lumpur, Malaysia. October, 2005

Test conducted in normal room conditions shows that mould growth on stale brown bread has been greatly inhibited.

WITHOUT MedKlinn

WITH MedKlinn

The two pictures demonstrate the difference in amount of mould growth on the two test samples of brown bread after a week of exposure in normal room conditions.
